

SwiftRoute Logistics

Data Dictionary

Reference guide for the Orders, Drivers, Hubs, and Vehicles datasets

1. Dataset Overview

Dataset	Records	Columns	Purpose
Orders	27,979	15	Transaction-level delivery and order performance data.
Drivers	55	6	Driver master data and employment/performance attributes.
Hubs	6	3	Hub master data and operational attributes.
Vehicles	45	7	Vehicle master data and fleet attributes.

2. Orders.csv

Records: 27,979 **Fields:** 15

Transaction-level delivery and order performance data.

Field Dictionary

Field	Data Type	Example	Description
Order ID	int64	1	Field in the Orders dataset; meaning inferred from the field name and observed data.
Actual Delivery Date	object	25-10-2024	Field in the Orders dataset; meaning inferred from the field name and observed data.
Delay Reason	object	Severe Weather	Field in the Orders dataset; meaning inferred from the field name and observed data.
Driver ID	int64	43	Field in the Orders dataset; meaning inferred from the field name and observed data.
Driver Name	object	Karen Rodriguez	Field in the Orders dataset; meaning inferred from the field name and observed data.
Hub Name	object	San Antonio Hub	Hub associated with the order.
Is Delayed	bool	False	Field in the Orders dataset; meaning inferred from the field name and observed data.
Is On Time	bool	True	Field in the Orders dataset; meaning inferred from the field name and observed data.
Order Date	object	25-10-2024	Date on which the order was recorded.
Order Status	object	Delivered	Current status/outcome of the order.
Vehicle Name	object	FT-036	Vehicle identifier/name associated with the order.
Vehicle Type	object	Truck	Field in the Orders dataset; meaning inferred from the field name and observed data.
Customer Satisfaction Score	int64	4	Field in the Orders dataset; meaning inferred from the field name and observed data.
Delivery Time Hours	float64	6.81	Field in the Orders dataset; meaning inferred from the field name and observed data.
Hub Processing Time Hours	float64	0.89	Field in the Orders dataset; meaning inferred from the field name and observed data.

Observed Values / Notes

- Delay Reason: Severe Weather, Customer Not Home, Incorrect Address, Road Construction, Package Sorting Error, Vehicle Breakdown, Hub Processing Delay, Multiple Delivery Stops, Driver Unavailable, Traffic Congestion
- Hub Name: San Antonio Hub, Houston Hub, Austin Hub, Fort Worth Hub, Dallas Main Hub, El Paso Hub
- Is Delayed: False, True
- Is On Time: True, False
- Order Status: Delivered, Cancelled
- Vehicle Type: Truck, Van, Pickup, Box Truck
- Customer Satisfaction Score: 4, 5, 3, 2, 1

3. Drivers.csv

Records: 55 **Fields:** 6

Driver master data and employment/performance attributes.

Field Dictionary

Field	Data Type	Example	Description
DriverID	int64	1	Unique identifier for a driver.
DriverName	object	Sarah Lopez	Driver's name.
Employment Type	object	Contract	Field in the Drivers dataset; meaning inferred from the field name and observed data.
Hire Date	object	23-11-2021	Field in the Drivers dataset; meaning inferred from the field name and observed data.
Experience Years	int64	6	Field in the Drivers dataset; meaning inferred from the field name and observed data.
Performance Rating	int64	4	Field in the Drivers dataset; meaning inferred from the field name and observed data.

Observed Values / Notes

- Employment Type: Contract, Full-time, Part-time
- Experience Years: 6, 3, 1, 7, 4, 2, 5, 10
- Performance Rating: 4, 5, 3, 2, 1

4. Hubs.csv

Records: 6 **Fields:** 3

Hub master data and operational attributes.

Field Dictionary

Field	Data Type	Example	Description
Hub ID	int64	1	Field in the Hubs dataset; meaning inferred from the field name and observed data.
HubName	object	Dallas Main Hub	Field in the Hubs dataset; meaning inferred from the field name and observed data.
Hub Capacity	int64	250	Field in the Hubs dataset; meaning inferred from the field name and observed data.

Observed Values / Notes

- Hub ID: 1, 2, 3, 4, 5, 6
- HubName: Dallas Main Hub, Houston Hub, Austin Hub, San Antonio Hub, Fort Worth Hub, El Paso Hub
- Hub Capacity: 250, 380, 220, 200, 180, 150

5. Vehicles.csv

Records: 45 **Fields:** 7

Vehicle master data and fleet attributes.

Field Dictionary

Field	Data Type	Example	Description
Purchase Date	object	22-07-2022	Field in the Vehicles dataset; meaning inferred from the field name and observed data.
Vehicle ID	int64	1	Field in the Vehicles dataset; meaning inferred from the field name and observed data.
Vehicle Model	object	Mercedes Sprinter	Field in the Vehicles dataset; meaning inferred from the field name and observed data.
Vehicle Status	object	Active	Field in the Vehicles dataset; meaning inferred from the field name and observed data.
Breakdown	int64	5	Field in the Vehicles dataset; meaning inferred from the field name and observed data.
Maintenance count Alert	int64	0	Field in the Vehicles dataset; meaning inferred from the field name and observed data.
Vehicle Code	object	FT-001	Field in the Vehicles dataset; meaning inferred from the field name and observed data.

Observed Values / Notes

- Vehicle Model: Mercedes Sprinter, Freightliner M2, Chevrolet Express, Chevrolet Silverado, Ford Transit, Isuzu NPR, International DuraStar, Ram ProMaster, Ford F-150
- Vehicle Status: Active, Maintenance
- Maintenance count Alert: 0, 1

6. Dataset Relationships

The datasets can be used together to analyze logistics operations. Orders contains transaction-level activity and links to driver, vehicle, and hub information, while Drivers, Hubs, and Vehicles provide master/reference attributes.

- **Orders → Drivers:** Orders.Driver_ID links to the driver identifier in the Drivers dataset.
- **Orders → Vehicles:** Orders.Vehicle Name links to the vehicle identifier/name represented in the Vehicles dataset.
- **Orders → Hubs:** Orders.Hub Name links orders to the corresponding hub.
